

# RELAX LENSES

Wide fields of vision for clear and relaxed vision throughout the day  
and for various activities.

The largest number of spectacle wearers usually get single vision lenses. Whether they are lenses for farsightedness, nearsightedness or astigmatism, it is necessary that they provide clear vision without peripheral disturbances.

**Relax Opensense** personalized lenses provide clearer vision compared to standard single vision lenses and are the best solution for all-day use.

**Relax Opensense** are personalized lenses made by a combination of advanced technologies and individual parameters. They provide high-quality, sharp and clear vision with a wide field of vision without image deformation in the periphery. They are comfortable to wear for a long time and are easily accepted by users. Vision is clearer and better compared to standard single vision lenses.

**Relax Opensense lenses** are widely used, because they are distinguished with

Improved image sharpness

Better color perception

Improved contrast

In order to achieve the best effect, it is recommended to choose protective coatings that will further improve the quality of the lenses.

**Relax Opensense lenses** are the best solution for sensitive wearers who have difficulties getting used to new glasses.

**PreCalc** is a special algorithm used in the production of prescription lenses to achieve the ideal thickness for the selected frame.

**Fitting note:** Align the fitting cross at the pupil center.  
For an appropriate choice of diameter and minimum fitting height, the suitable centration charts should be used.

- Improved image sharpness
- Better color perception
- Improved contrast
- Wide field of vision
- Easy adaptation
- Peripheral vision without astigmatic disturbances

Relax Opensense - Clear central and peripheral vision will satisfy dynamic and demanding users.

Technologies used in Relax Opensense design

Calculation at every point

By calculating thousands of individual points, the dioptric powers are distributed, which enables a high quality of vision.

FaceFit

Recalculation of dioptric power from the prescription, taking into account average individual parameters, for wider field of vision and clear vision in all directions.

OPTIONAL

Individual parameters

The design, comfort and performance of the corrective lens can be further improved by introducing individual parameters. Taking into account the data of the selected spectacle frame and the unique parameters of the wearer, an improved individual lens is obtained that fully matches the characteristics of the wearer.

Relax Opensense lenses have universal use, they are suitable for all weather conditions and for wearing throughout the day, both indoors and outdoors.

Daily activities with the use of digital devices can cause eye fatigue, headache and strain when focusing. Relax Reading Digital lenses help the eye to focus more easily and enable relaxed vision.

Reading different sizes of letters at different distances and frequently changing the focus from near to far objects **leads to eye muscle fatigue.**

Daily use of digital devices, working at close range and being in artificial lighting conditions **cause headaches and eye fatigue.**

Relax Reading Digital are personalized lenses intended for people who feel tired when working at close range, using digital devices and reading printed content. They enable relaxed vision and natural position of the head and body during daily activities, use of digital devices and long-term reading. They are an ideal solution for people who feel first discomfort due to presbyopia.

Relax Reading Digital are corrective lenses made with a combination of advanced technologies, available in three additions 0.50/0.75/1.00.

Relax Reading Digital - ophthalmic lenses for a digital lifestyle.

Technologies used in Relax Reading Digital design

Calculation at every point

By calculating thousands of individual points, the dioptric powers are distributed, which enables a high quality of vision.

FaceFit

Recalculation of dioptric power from the prescription, taking into account average individual parameters, for wider field of vision and clear vision in all directions.

OPTIONAL

Individual parameters

The design, comfort and performance of the corrective lens can be further improved by introducing individual parameters. Taking into account the data of the selected spectacle frame and the unique parameters of the wearer, an improved individual lens is obtained that fully matches the characteristics of the wearer.

Relax Reading Digital corrective lenses are the ideal solution for people who feel first discomfort due to presbyopia.

Practicing sports, as a hobby or professionally, provides us with some of the most beautiful moments of entertainment. In order to enjoy sports activities in the best way and achieve the best results, it is necessary to see well. Perfect vision gives us a sense of security and comfort.

**Relax Sport** personalized lenses are specially created for sports and high curved frames.

They provide good peripheral vision, necessary for a dynamic lifestyle and for athletes. They reduce feeling of distorted image and expand field of vision, without lateral deformations. They are characterized by improved image sharpness and improved contrast.

Lenses that are designed **to improve comfort and contrast** in all weather conditions and surfaces on which you move.

Features:

- The curved base perfectly supports the curvature of the selected sports frame;
- Ideal for curved frames up to 25°;
- When ordering Relax Sport lenses, it is mandatory to emphasize the base curvature of the lens;
- The possibility of choosing materials and treatments that suit different weather conditions and needs;
- For various outdoor activities, the addition of UV protection is recommended.

Relax Sport was developed for all lovers of sports activities who want to achieve perfect vision while enjoying sports.
